

1. Cards

A > Draw Card:

If there is no specification regarding which deck to **draw** a card from, you **take** the top card from your Grimoire  into your hand. If you draw an event card from the event deck and it shows the crown symbol , you **receive** the crown token. When playing with many expansions, it can easily happen that you draw a card that refers to a (accidentally) non-existent game element. In that case, simply **discard** the card and **draw** a new one.

B > Discard Card:

Cards are set aside after use, depending on the card type and possibly the effect that led to **discarding**. Often, effects describe where the card should be placed after use. Quests, events, spell cards from your hand, or from your Mage Sheet are usually placed on their designated discard pile after use. For your spell cards, these are typically your memories . Your completed  or solved  quests go to the right side of your Mage Sheet. Cards that are not randomly drawn but instead selected from the supply like Evocation cards, haunting cards, or jinx cards, go back to their supply after use. Cards can remain in play for a while before being discarded. A special case is the Forgotten Spells. When their effects are **applied**, they are removed from the game during the cleanup phase. "**Discard card**" also describes an action you can take during your activation in the action phase. You can **discard** a ready or activated spell from your Mage Sheet into your memories  to move your Mage up to one room.

C > Look at X Cards from Deck:

Set aside your hand cards. Now **draw** X cards from the specified deck. The effect that allows you to **look at** cards describes what to do with those cards afterwards. Unused cards are usually put back on top of the deck. Sometimes, it is specified in which order the cards should be returned.

D > Search Deck for Card:

Set aside your hand cards. **Take** the mentioned deck and find the card, often a specific card or a card of your choice. The effect that allows you to **search** describes what to do with the card and whether the deck needs to be **shuffled** afterward. If this information is missing, there is no need to **shuffle**.

E > Reveal Card:

You must show the respective card's content to all players.

F > Shuffle Card Deck:

Follow the instructions of the effect. Sometimes, multiple card decks are combined, and the cards are put in a random order. For example, memories  are **shuffled** together with the Grimoire  when the Grimoire is empty. The **shuffled** deck becomes the new Grimoire .

G > Take/receive Game Element:

The effect describes which game element is transferred where. Often, cards or the crown token are **taken**. If not further described, spell cards are usually **taken** into the hand. For other cards, such as quests or events, the effect or the rules of the game describe more precisely what to do.

2. Damage/(In)stability

A > Place X (In)stability :

On the target room, put X (In)stability markers of the Mage or the Black Rose , depending on who controls this effect. A room cannot have more markers than its (In)stability track can accommodate. Excess markers cannot be placed. Many spells or Avatar command cards show a specific (In)stability symbol . Before triggering their effect, place an (In)stability marker in the Mage's or Avatar's room. If the room's track is full during the cleanup phase, the room becomes rebuilt or destroyed (BRW).

B > Inflict X Damage :

The controller of the effect puts X of their damage markers on the target model's Mage Sheet/Avatar Board (Mage/Avatar) or the Evocation card below the Mage Sheet/Avatar Board (Evocation). Sometimes, the effect

describes the source that is causing the damage. Then, use the damage markers of this source. A model cannot absorb more damage markers than it has Health . When the Health value is reached, the model is **defeated**.

C > Suffer X Damage :

X damage  are inflicted on your Mage or the Avatar. The effect describes the source causing the damage. Place X corresponding damage markers on the Mage Sheet/Avatar Board. A Mage cannot absorb more damage markers than their Health . When the Health value is reached, the Mage is **defeated**.

D > Pain X:

The Black Rose  **inflicts** X damage on you. Place X Black Rose damage markers on your Mage Sheet.

E > Heal X Damage on Model:

The controller of the effect returns X damage markers of their choice from the target to their owners. Black Rose  chooses and returns markers from right to left.

F > Convert X Damage or (In)stability :

The controller of the effect may replace up to X damage or (In)stability markers of their choice on the target with their own ones. Return the replaced markers to their owners. Black Rose  chooses and converts markers from right to left.

3. Power Points

A > Gain X Power Points :

The target increases its Power Points on the points track by X (+X ).

B > Lose X Power Points :

The target decreases its Power Points on the points track by X (-X ).

C > Steal X Power Points :

Reduce the target's Power Points by X (-X ) and increase your own Power Points accordingly (+X ). If you attempt to **steal** more Power Points than are available, you only receive the available ones.

4. Model

A > Summon Name or Evocation Archetype:

An Evocation  can be **summoned** either with the specific name of the Evocation or by allowing the summoner to choose from models of a type by specifying the Evocation Archetype. Search for the corresponding card from the Evocation cards and place it below the Mage Sheet/Avatar Board of the **summoning** Mage/Avatar in an empty Evocation slot   . If there is no empty slot, the Mage may first **discard** an existing Evocation . Now, **take** the corresponding model from the supply and mark it according to the number of the selected slot with a base ring (or the large base ring) or rose markers (BRW) in the color of the **summoning** Mage or the Black Rose. Place the model in the target room. If there is no corresponding model or card in the supply, the **summoning** cannot take place. A Mage can only control one large Evocation at any given time (in BRW it is not limited). Nightmares are special Evocations but are brought into play using a **haunting** effect.

B > Haunt Mage/Avatar:

Evocations  of type Nightmare are not brought into play through **summoning** but through a **haunting** effect (usually by a spell, quest or room effect or an Avatar action). Unlike regular Evocations, Nightmares belong to the Black Rose , so you cannot **activate** them as your Evocation (except if an effect says **awaken**), but you can **attack** and inflict damage  to them as with all evocations (usually to get rid of them). When **haunting** a Mage/Avatar, **search** the corresponding Evocation card and add it to one of the three Evocation slots    of the **haunted** Mage/Avatar where no Nightmare card is present. This does not remove an Evocation of a different Archetype. If this is not possible, you may replace another Nightmare. A Nightmare does not block this slot for summoning a different

Evocation Archetype. Take the appropriate model for the Nightmare and place it next to the model of the **haunted** Mage/Avatar. A Nightmare always moves with the **haunted** Mage/Avatar until either of them is removed. Spell effects cannot move Nightmares. All Nightmares are **awakened** at the beginning of the Evocation phase by the Black Rose 🌹, with the player holding the crown token 👑 determining the order. When a Mage/Avatar is **defeated**, all Nightmares **haunting** them are **removed**. See also **awakening**. Avatars remove one of their hunting Nightmares of 👑 player's choice during cleanup phase if available.

C ➤ Defeat Model:

A model is **defeated** once the number of damage markers on it reaches its Health value ❤️. A **defeated** Evocation is returned to the supply together with its card. Any game material on or associated with it (e.g., upgrade card) goes to the owner or back to the supply. A **defeated** Mage/Avatar is placed in their cell. Remember to distribute power points ⚡ and a trophy 🏆, return the damage markers to the owners, and possibly **remove** the **haunting** Evocations. Activation or a spell just cast by a **defeated** Mage continues in the chamber. However, a physical action is canceled. Detailed rules can be found in the game rules in the section "**Defeating** Mage".

D ➤ Remove Evocation 🗑️ :

The model of a **defeated** or **removed** Evocation is returned to the supply together with its card. Any game material on or associated with it goes to the owner or back to the supply. This includes attached upgrades but not Nightmare cards in the same slot ♦ ♦♦ ♦♦♦, as they are not associated with the removed Evocation but with the Evocation slot.

E ➤ Awaken Evocation 🧛 :

The Evocation may **move** 🧛 (except Nightmares) and **attack** 🌟 before or after moving and, if available, use its ability. A Nightmare **attacks** the Mage and deals 1 🧛 to any 🧛 in the same Evocation slot ♦ ♦♦ ♦♦♦.

F ➤ Move 🧛 Model:

A model may move to an adjacent room. You may repeat this up to the movement value 🧛 of the model.

G ➤ Attack 🌟 Model:

A model **deals** damage 🧛 equal to its attack value 🌟 to a target model.

H ➤ Upgrade Evocation 🧛 :

Select the mentioned upgrade card from the upgrade deck and place it with the corresponding Evocation card. The Evocation 🧛 receives the modification described on the upgrade card until either the Evocation is **removed** or the upgrade card is **discarded**. An upgrade is **discarded** when the upgraded Evocation is **removed**. An Evocation can only be **upgraded** once. With a subsequent upgrade, one of the two upgrades must be **discarded**. If the sought-after upgrade card is not available, **upgrading** cannot take place.

I ➤ Jinx Mage/Avatar:

Select the jinx card from the jinx card deck and place it next to the corresponding Mage Sheet. This Mage suffers the impairing effect on the jinx card until the card is **discarded**. The jinx card describes how it can be **discarded**. This does not happen automatically when the Mage is defeated. If a Mage is to be jinxed again with an already present jinx, or if the sought-after jinx card is not available, ignore this jinx.

J ➤ Teleport Model:

The model is placed in the target room. It enters that room. Other rooms between the starting and target room are not entered and therefore do not trigger traps.

5. Quest

A ➤ Complete Active Quest:

If you have fulfilled all the conditions of an active quest 📜, place it face-up as a **completed** quest 📜 on the right side of your Mage Sheet. During your activation in the action phase, you can **solve** 📜 it by taking its bonus effect(s). When solved you gain its power point reward ⚡ and flip it over.

B ➤ Solve Completed Quest 📜 :

During the action phase, you may **solve** one or more **completed** quest 📜 before or after one of your actions by receiving the bonus effects (if any). Once solved 📜 you gain the power point reward ⚡ from these quests and flip them over. If an effect allows you to **solve** an incomplete task, you only receive the power points ⚡ but not the bonus effect(s). Flip the **solved** quests 📜 over.

6. Others

A ➤ Activate Room 🏠 :

If only the effect printed on the room is visible, **apply** that effect. If an activation token is on the room, **apply** its effect and flip the token to its inactive side denoted by an X. If the token is already on the inactive X side, then the room cannot be **activated**. Effects with costs are only **applied** if the cost is paid, but activation occurs in any case. An exception is the Black Rose room, which can only be **activated** if the costs (usually discarding cards) are fully paid.

B ➤ Refresh Physical Action 🧑🏻⚔️ :

If not all your Physical Action tokens 🧑🏻⚔️ already show the front side, turn one of your Physical Action tokens 🧑🏻⚔️ to the front side. If you do this, you gain an additional action for this action phase.

C ➤ Apply Effect:

An effect can come from several sources such as for example rooms or spells. Effects can consist of multiple steps, each separated by a "." (period), although this separation may not always be present in BRW. The individual steps of an effect are **applied** sequentially. Even if individual steps cannot be **applied**, subsequent steps are **applied** whenever possible. Some steps require payment, such as discarding a card to gain their effect. The effect cannot be used without payment.

D ➤ Receive/Take the Crown/Crown Token 👑 :

Take the crown token and place it in front of you. At the beginning of the next phase, the player with the crown token becomes the starting player.

E ➤ Ignore Effect:

You do not have to **apply** the effects, such as damage 🧛 or power point loss -⚡. The effect takes place, but it has no effect on you or your Evocations.

F ➤ Enhancement Element(s): Enhancement Effect:

An effect on a card is expanded by an additional effect (the **enhancement** effect) if the controlling player of the effect can already provide the required elements on the other revealed spells on their Mage Sheet. Otherwise, the enhancement effect is not **applied**. Don't forget that 🌀 represents one of any Element of your choice
